

Fort Belknap Primary Care Service Area

Executive Summary

Summarizes the Site, Parking, Facility Size, Staff and Contract Health Dollars necessary for the Service Delivery Plan in 2015. Identifies the Direct Care Services Offered to include highlighting any new services. Identifies the communities and population served for each service.

The second page of the Executive Summary documents the priority resource issues as identified through the Master Planning process.

Historical Utilization

Documents 3 years of RPMS and contract care workloads provided to the user population of the Service Delivery Area by product line and specialty.

Market Assessment

Compares the Historical Workload to the Health System Planning software and to national averages of patient care utilization, projecting future workloads based upon the worst case of these three planning scenarios. Also documents the percentage of care that will require contracting due to acuity and the quantity of care that can potentially be served by the direct care system.

Service Delivery Plan

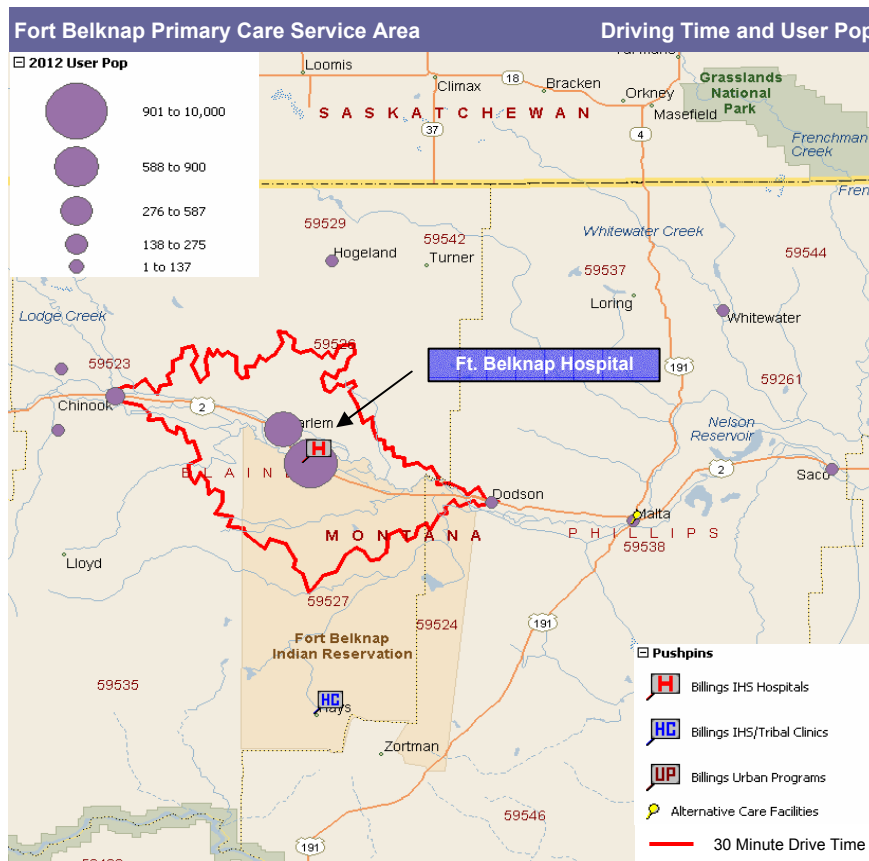

Recommended service delivery plan by product line based upon projected workload, key characteristics, patient classification and tribal and IHS input.

Resource Allocation

Quantifies the necessary space and key characteristics for the Service Delivery Plan and compares them against existing resources. Also tabulates necessary contract health dollars based on the delivery plan.

Executive Summary

| Campus Infrastructure Priorities | |
|----------------------------------|---|
| 1 | DDC Controls – Not energy efficient, vendor non-responsive, antiquated system when installed. |
| 2 | Water Utilities – Local water utilities under boil order since building built. |
| 3 | Sink faucet apparatus – The sinks were fitted with three different types of faucet apparatus; two of which create an infection control problem. |
| 4 | Generator capacity too small – We need more power generation from the generator. |
| 5 | No secondary water source – There is no back-up water source for the facility in case of water outage. |
| 6 | Landscaping not graded away from building – When it rains, the water flows into the building instead of away from the building. |
| 7 | Very little insulation in roof – We lose approximately 55% of our heat through the roof. We only have 1/3 the recommended amount of insulation installed. |
| 8 | Lights on Grounds – More lights on the building, less in the parking lots that are not used during the night. |
| 9 | There is no water-main bypass - If we need to work on parts of the water supply, we have to shut water down to the whole building. Also, there are no Pressure Reducing/Sustaining valves. These are required if you have a sudden rise or drop in water pressure to protect equipment. |
